

CERTIFICATE OF STERILIZATION

Note: OSHA Standards (29CFR1910.1030) require instruments to be sterilized prior to shipping.

OSHA Bloodborne Pathogens Standard (29CFR1910.1030) requires the use of appropriate sterilization on potentially contaminated equipment and instrumentation prior to transporting. This is necessary to ensure that equipment is in a condition that makes it safe to be handled by all personnel who may encounter it during transit and subsequent handling. All used surgical equipment is assumed to have potential exposure to blood or other potentially infectious materials.

By completing this form, you are confirming that the sterilization performed on the enclosed instruments meets the OSHA Standards outlined above. Failure to do so will delay or void your potential return.

Instructions:

1. Please complete the repair form PDF located at usstore.movora.com/repairs prior to shipping.
2. Sterilize using OSHA-approved protocols.
3. Complete the certification form below.

Proof of Sterilization:

Sterilization of the power equipment, accessories and/or implants for shipment to MOVORA with the form checked below was performed as above.

Repair Request

Rental/Demo return

Sterilization was performed by: _____

Printed Name: _____ Customer Number: _____
